

Dias Saiynov

Flutter Mobile Developer

+7 747 580 5502 | dsaiynov01@gmail.com | [LinkedIn](#) | [GitHub](#) | Astana, Kazakhstan

Summary

Flutter Mobile Developer with 3+ years building and maintaining production apps across Flutter and native iOS, including full ownership of a cross-platform migration serving iOS and Android from a single codebase. Strong in mobile app architecture (MVVM, Clean Architecture), REST API integration, and state management (Riverpod, BLoC, Provider), with hands-on experience in Fastlane-based build/release automation and app store deployments. Used to working in Agile, cross-functional teams alongside Product, Backend, QA, and UX - reviewing code, debugging production issues, and improving app performance and stability.

Technical Skills

Mobile Platforms: Flutter (iOS & Android), Dart, Swift, SwiftUI, UIKit - architecture: MVVM, Clean Architecture, Coordinator, VIPER, TCA

State & DI: Riverpod, BLoC, Provider, Combine, RxSwift, GetIt, Injectable

Networking & Data: RESTful APIs, Dio (custom interceptors, auth, error handling), URLSession, CoreData, SwiftData, Hive, SharedPreferences

Platform Services: Firebase (Auth, Firestore, FCM, Analytics, Crashlytics), GoRouter, Localization (EN/KZ/RU)

Quality & Tooling: Unit Testing, CI/CD & App Store Deployment (Fastlane), Git, Agile/Sprint workflows, Code Review, Xcode, Android Studio, Figma, Postman, Swagger, Pulse

Experience

Flutter Developer - KoraTalk01/2025 – Present

Astana · Cross-platform Mobile (iOS & Android)

- Owned the migration of the KoraTalk app from iOS-only SwiftUI to Flutter, delivering a single codebase that ships simultaneously to iOS and Android — the same cross-platform ownership model this role requires.
- Architected the app on MVVM with Riverpod, keeping view models testable and concerns cleanly separated across 15+ feature modules - directly aligned with the MVVM/Clean Architecture expectations of the role.
- Integrated the app's REST API layer with the backend team using Dio and custom interceptors for auth token injection, error handling, and request/response logging, replacing manual URLSession networking.
- Led performance-focused UI work in sprint cycles: built a 20+ component design-token widget library that cut per-screen UI implementation time by ~35%, directly improving app responsiveness and consistency.
- Collaborated daily with Product, Design, and Backend to translate requirements and Figma specs into a shared widget system; reviewed pull requests and helped maintain coding standards across 15+ feature modules.
- Debugged and resolved production issues surfaced through Firebase Analytics and Crashlytics, and supported store releases and build automation using Fastlane.
- Implemented GoRouter navigation with auth-guard middleware and deep-link routing from push notifications; integrated Firebase Auth, Firestore (real-time chat/feed), and FCM.
- Shipped full EN/KZ/RU localization with runtime locale switching, demonstrating experience building for diverse, international user bases.

iOS Developer - KoraTalk08/2024 – 12/2024

Astana · iOS

- Designed and implemented nearly all app screens in SwiftUI using MVVM and Coordinator patterns for a consistent, scalable UI/UX.
- Built 6+ adaptive UI components, reducing UI bugs by 40% and improving long-term feature scalability.
- Refactored the codebase to a modular architecture, cutting code duplication by 50% — groundwork that directly enabled the later Flutter migration.
- Integrated Pulse for network request monitoring and debugging, and implemented deep linking for contextual push-notification navigation.
- Built and integrated the in-app payment module, ensuring reliable, secure in-app transactions.

iOS Intern — Qpia11/2023 – 12/2023

- Built a real-time leaderboard feature using Firebase Realtime Database and Cloud Functions.
- Delivered a modular VIPER-architecture codebase including push notifications and in-app update flows.
- Presented a technical deep-dive on backend workflows and Firebase integration to the full engineering team.

Projects

KoraTalk — Social Communication Platform

Cross-platform Flutter app (iOS & Android) with real-time chat, social feed, and in-app payments; full rewrite from an iOS-only codebase.

Stack: Flutter · Dart · MVVM · Riverpod (state management) · Dio · REST APIs · GetIt/Injectable · Firebase · GoRouter

Bambook

iOS app recommending books via deep learning on large datasets. Stack: Swift · UIKit · VIPER · Firebase · CoreML

Education

Nazarbayev University — B.Sc. Computer Science, 06/2019 – 06/2024

Certifications

- AndersenLab — Git, Layouts, Reactive Programming, Data Storage, Testing (2024)
- OneLab Technologies — Swift Foundation, Fastlane, Multithreading, Architectures, App Publication (2024)
- Udemy iOS Bootcamp — Swift, SwiftUI, CocoaPods, Firebase, Realm, CoreML, ARKit (2023)

Languages
